

Spatial Atlas discipline, pointed at **ad adjacency**

Typed scene state becomes a typed PolicySpec · Fail-closed execution becomes deterministic
verdict gates · Confidence-gated revision becomes selective reasoning

Adjacency

SYSTEM

Brand safety

SURFACE

Read-only

MODE

Keywords are legible, but the risk is often **between modalities**

- X exposes advertiser-controlled adjacency keyword exclusions
- A safe discussion can contain a blocked word
- A risky image can accompany clean text
- Source: src/adjacency/baseline.py and X Brand Safety documentation

Prose → terms **Joint context**
REPRESENTATION MISSING SIGNAL

Compile intent, inspect inventory, admit evidence, compare outcomes, route review

Source: ARCHITECTURE.md and src/adjacency/

- COMPILED, NOT PROMPTED

Every clause must point back to the words that authorized it

- PolicySpec is typed, immutable, versioned, hashed, and diffable
- GO checks exact character spans at compile time
- The keyword baseline is generated from the identical prose
- Sources: artifacts/tuesday/policy_spec.json and artifacts/tuesday/baseline_blocklist.json

GO

COMPILER ADMISSION

Same prose

BASELINE

Both directions matter: missed risk and recovered safe inventory

Adjacency Autopsy

Compare the compiled policy engine with the same-prose keyword baseline.

DEMO MODE · FROZEN CORPUS · NO API KEY

Artifact-backed Autopsy after the G1 gate failure. Sources: artifacts/ui/autopsy_snapshot.json and artifacts/ui/economics_assumption.json. The dollar counter is illustrative.

A persuasive rationale cannot argue past **G1_SPAN_NOT_FOUND**

- The proposed ALLOW becomes REVIEW
- The row enters the human queue
- The audit drawer retains every applicable gate
- Source: artifacts/ui/autopsy_snapshot.json

ALLOW

BEFORE

REVIEW

AFTER

Fail closed

RULE

The strongest numbers test the failure path

OBSERVED RESULT	ARTIFACT
12/12 faults caught, 0/4 clean rejected	artifacts/tuesday/synthetic_faults.json
68% grounding failure, raw-prompt run 1	evals/prompt_baseline/comparison.json
2% cross-run action disagreement	evals/prompt_baseline/comparison.json
44% routed to Tier 2	artifacts/wednesday/judge_report.json
\$6.12 per 1,000 decisions	artifacts/wednesday/judge_report.json
Real Temporal round-trip completed	artifacts/temporal/hitl_live_proof.json

The measured ladder is **bimodal**, not a smooth curve

- Tier 0 absorbs the deterministic clean-text slice
- Tier 1 is a narrow residual in the frozen run
- Tier 2 handles the multimodal and uncertain cases
- Source: artifacts/wednesday/judge_report.json

Observed routing. Source: artifacts/wednesday/judge_report.json

44%

TIER 2 FRACTION

\$6.12 / 1,000

BLENDED JUDGE COST

- SAME DISCIPLINE, SECOND SURFACE

One image in. A family where **exactly one thing** changed.

- Fifty variants tell you nothing, because no difference is attributable
- ImagineSignal changes one declared axis and locks the rest
- Product, logo, composition and text are verified byte-identical
- Sources: artifacts/imagine_signal/offline_demo.json

background_tone **1 control + 2 variants**

DECLARED AXIS

FAMILY

The provider is **one method** behind a **typed port**.

- ImagineTransport is a Protocol with a single invoke
- Replay is the default and needs no credential or socket
- A missing fixture is terminal: there is no fallback to a live call
- An unreported cost halts spending instead of recording zero

REPLAY / RECORD / LIVE **1e10 ticks = \$1**

MODES

COST UNIT

Nine gates, and a ceiling on what the evidence permits.

- IS0 through IS8 are pure functions, held at 100 percent line and branch
- The final action is the most restrictive of the proposal and every failed gate
- Frozen replay cannot authorize anything beyond TEST
- Sources: `src/adjacency/imagine_signal/gates.py` and `decisions.py`

ISO to IS8

GATES

TEST

CEILING

NO_GO

PRODUCTION

- MEASURED, NOT ASSERTED

The objective is **qualified evidence per generation dollar.**

- Cost comes from the provider's reported ticks, recorded per call
- Explore on the standard model, promote only qualified candidates
- A moderation rejection is terminal and is recorded, never reworded
- Sources: hackathon/COST_LEDGER.md

\$0.02 / 1K

STANDARD

\$0.05 / 1K

QUALITY

from the ledger

COST PER QUALIFIED OUTPUT

Real Cloud review, offline demo, staged rollout

- Temporal proof: PENDING query → adjudication signal → ADJUDICATED query → completed workflow
- Artifact: artifacts/temporal/hitl_live_proof.json
- Demo default: in-process queue with no API key
- Rollout: read-only autopsy → shadow evaluation → per-clause activation
